DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 12/04/2001 has been considered by Examiner and made of record in the application file.

Claim Objections

2. Claim 3 is objected to because of the following informalities: dependent claim 3 can not depend on it self, examiner assume claim 3 depends on claim 1. Appropriate correction is required.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 2643

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-17 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 and 14-16 of US Pat. No. 6,594,364. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the limitations, i.e., receiving a radio frequency (RF) signal having an information component and an interfering component, delaying the RF signal by a reference delay time, processing the RF signal and the delay RF signal to form a processed reference RF signal, determining the amplitude of the interfering signal component, varying the delay of the RF signal as the characteristic frequency of the interfering signal component, are transparently found US Pat. No. 6,594,364.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ross et al. (US PAT. 5,652,799) discloses noise reducing system (col. 1 lines 8-13). Nakaji et al. (US PAT. 5,416,844) discloses apparatus for reducing noise in space applicable to vehicle passenger compartment (col. 2 lines 9-32).
